Hi All,

In today's meeting, Poul and I discussed:

- Our progress so far and the difficulties we've had
  - Getting individual frames from both monochrome cameras
  - Unable to record at high resolution and high frame rate - will experiment with the best combinations available
- Clarified what work we will be doing with the image tracking algorithm
  - We will be attempting to avoid working with a 3d point cloud in favour of developing a model of a neutral face
  - We then apply deformations to the model rather than a point cloud

For this week Gary and I will mostly be working on research and writing our literature reviews as the interim reviews are due in a couple of weeks.

Cheers,

Liam
